## Primeseal Coating

Primeseal is a two pass commercial coating providing a moisture block seal to both faces of the door. This coating minimizes warping and cupping, a common problem typical of MDF faced doors, yielding a more predictable outcome for your project.

The Primeseal coating is off-white in colour, has a high level of opacity, very good scuff resistance and is an ideal base for most types of paint. Primeseal is available on all types of MDF faced doors up to 3600 x 1200mm.

Need a door up to 4000mm wide? Ask about our multi piece kit form sliding door for site assembly - the trades love this system!

## Ultraseal Premium Coating

Ultraseal is the premium coating, sealing the door on both faces and all four edges! This encapsulates the door, providing a high level of protection from warping and cupping.

Did you know that a basic qualification for warranty on timber doors is 'all faces and edges must be sealed before hanging'? Ultraseal sets you well on your way to secure your warranty, giving you peace of mind and minimizing painter's preparation time.

Ultraseal is available on all types of MDF faced doors up to 3600 x 1200mm.

## Dorpro Interior Doors

Dorpro MDF interior doors come in stock sizes or be custom manufactured to your size in Light Weight, Semi Solid or Solid Core. The standard specification with MDF frame components provides generous allowances for onsite trimming or changes.

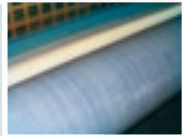

Dorpro interior doors are available with a wide range of additional features including: timber frames, plywood or decorative veneer faces, timber edge strips, glazing or vent cut-outs and high density polystyrene cores. Dorpro interior doors are available in sizes up to 3600mm x 1200mm in all varieties of leaf thickness.

## Dorpro Exterior Doors

Dorpro solid core exterior doors boast high quality paint grade plywood or Duracote hardboard faces. Hardwood frames and solid timber cores will secure your opening from the wild outdoors!

Dorpro exterior doors are available in both stock and custom sizes to suit a wide variety of applications. They can be pre-machined for seals and locks, saving site time and mess. Primeseal and Ultraseal coatings are also available on project lots of Dorpro exterior doors.

**Integrity and care  
is the heart of real  
customer support.**

## Door Frames

Inside, outside, fire rated, non rated, zincanneal, galvanized or stainless steel? You name it; we can supply the right pressed metal door frame to suit your job. Available with a full range of fixing options including stud wall, block work and wall systems. We can also cater for most accessory preparations.

## High Performance Door Sets

Smoke doors, fire doors, access panels and frames that save and protect! We supply a range of industry proven, high quality door leaves and frames by licensed manufacturers - certified products to meet your fire rating criteria. High performance door sets are supplied in custom sizes to suit various wall types.

## Interior and Exterior Pre-Finished Doors

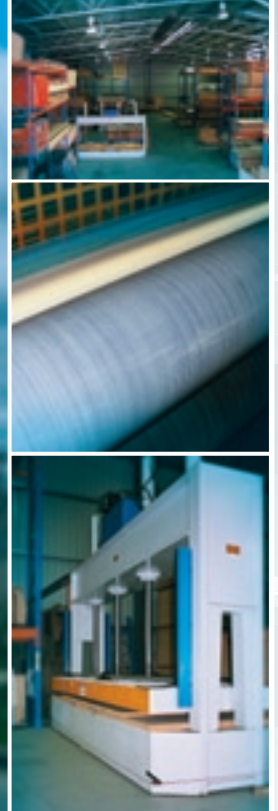

For interior and exterior applications in commercial industrial and domestic type situations. Décor and Vista pre-finished doors are designed to provide increased efficiency, significant time savings and simpler, more predictable outcomes - ultimately boosting your bottom line.

## Steel Clad and Architectural Doors

Purpose built doors for heavy duty, external and acoustic ratings. These doors can also be dressed for architectural purposes. For example, feature clad in brushed stainless steel or many other finishes to suit the interior design theme.

Ask us about pre-machining and hardware packages to save further time and avoid messy on site machining.
